

Aithics represents a pioneering convergence of the neuroscience and artificial intelligence designed to create a real time mental state detector, capable of accompanying human life in its most personal, familial, social, and professional dimensions. At its essence, aithics is more than technology: it is a companion – an alternative presence that seeks to understand and support the human mind, moments by moments across the diverse landscapes of life.

Executive Summary

aithics, Inc. is a mission-driven neuroscience and AI technology company dedicated to one of the most urgent needs of our time: understanding and supporting the human mind in real-time. Founded on the belief that human consciousness is both a biological and ethical frontier, aithics is pioneering a revolutionary digital platform that integrates cutting-edge brain science, ethical artificial intelligence, and ecological mental health philosophy into a real-time mental state detection system.

At a time when digital devices track everything but our inner emotional and cognitive states, aithics offers something transformative: a window into the mind, a mirror to consciousness, and a companion for mental resilience. Our motto, “Home of Human. Conscious.”, reflects a deep commitment to preserving dignity, awareness, and emotional health in an age of algorithmic overload.

I, M. Z. Quadry, (Swapan), assume the responsibility of ensuring that aithics stands the test of time.

As an entrepreneur and CEO of aithics, my journey began with valuable experience in Silicon Valley, followed by more than two decades of service as a community leader, engaging with people from all walks of life. Today, I am honored to be joined by visionary co-founders and friends: Dr. Golam Chowdhury, Neuroscientist and Professor at Yale School of Medicine; Arif Billah, International Businessman; and Rayhan Khan, Software Engineer recognized for building the renowned digital platform of Square Hospital and leading academic institutions. Together, the four of us founded aithics at the dawn of Artificial Intelligence and in the wake of groundbreaking discoveries in Neuroscience—seizing this pivotal moment to use human consciousness as a tool.

The Problem We Are Solving

Despite vast technological progress, society has failed to address the most intimate human crisis of the 21st century: the mental health epidemic. From burnout and loneliness to anxiety, depression, and suicide, the world is suffering from an invisible plague of psychological suffering. Technological overstimulation, environmental disconnection, and chronic stress have made mental health fragile — yet detection remains reactive, stigmatized, and deeply inaccessible.

Even as wearables track heart rates and sleep cycles, no accessible tool exists to detect the nuanced fluctuations of human emotion, stress, or cognition — leaving people unaware of their mental trajectories until crisis hits. The mental health industry remains fragmented, late-stage, and underequipped for preventive care.

Our Visionary Solution: Real-Time Mental State Detection

aithics is creating the world's first scalable, ethically aligned real-time mental state detection platform — a digital ecosystem that seamlessly integrates neurobiological, psychological, behavioral, and environmental indicators to track and respond to the human mind.

We are developing a neuroscience-informed, AI-powered system that:

- Continuously assesses users' mental states through validated biomarkers and behavioral data
- Provides real-time feedback and micro-interventions to enhance emotional clarity and cognitive balance
- Supports individual awareness and connects users to community or clinical resources
- Embeds ecological and ethical design to ensure user agency, privacy, and psychological safety

aithics is not a gadget — it's an ethical evolution of personal technology: a tool for the soul in the digital age.

Scientific & Ethical Foundation

The platform is spearheaded by Dr. Golam M. I. Chowdhury, a globally respected neuroscientist and Professor of Psychiatry at Yale School of Medicine. Dr. Chowdhury brings over 23 years of pioneering research in brain metabolism, consciousness, and stress biology. His academic leadership ensures a deep commitment to both scientific rigor and humanistic responsibility.

The interdisciplinary team behind aithics includes:

- Engineers and designers from global hospital systems and educational technology platforms
- Clinical psychologists and AI ethicists
- Community health partners and ecological mental health researchers

This convergence of disciplines reflects a foundational principle of aithics: mental well-being is not isolated from the environment, society, or technology — it is embedded within them.

Our Broader Impact: Ecological, Social, and Public Mental Health

The implications of the aithics platform go far beyond software:

- For individuals: Early detection and daily regulation of mental health fosters emotional resilience.
- For communities: We enable emotional literacy through partnerships with schools, local leaders, and public forums.
- For public health systems: Our model promotes preventive mental care, reducing long-term healthcare burdens.
- For the environment: By restoring cognitive alignment with natural rhythms, we address the psychological harms of ecological alienation.

aithics redefines digital health as both sustainable and soulful, merging brain science with environmental awareness and public well-being.

Commercial Strategy and Growth Plan

The global mental health technology market exceeds \$5 billion and is growing rapidly. aithics is strategically positioned to capitalize on this momentum, starting with its soft launch of an MVP prototype on July 2, 2025, and growing user interest from students and healthcare interns.

Revenue Model:

- Direct Subscriptions for individuals (freemium + premium)
- Enterprise Licensing for universities, HR departments, mental health organizations
- Clinical API Integration with digital health and wearable devices □ Data Insights Platform for clinicians and researchers (HIPAA-compliant)

Call to Action: Join Us in Building Conscious Technology

We invite early investors, visionary technologists, and social entrepreneurs to help fund the future of emotional intelligence. As a mission-first enterprise, aithics combines the entrepreneurial spirit with the solemn duty of healing the fractured inner lives of modern humans.

This is not just a startup — it is a movement for humane technology, built on ethics, evidence, and empathy.

Let us reimagine what it means to check in with ourselves.

Let us redefine mental health — not as a diagnosis, but as a daily discipline of awareness. Let us build, together, a digital sanctuary for the human mind.

From day one aithics started a grassroot campaign to fight stigma on human level, locally & globally. CUNY students are testing aithics prototype as summer interns and close friends and family joined the bandwagon. Data flows from local community organizations and Mental Healthcare Professionals.

Waking up every morning; first glance on our phone we get time & temperature, NY1, 1010 Wings gives us the world in 10 minutes and apple watch showing the pulse. aithics shall give a real time status of our state of mind. Moreover, aithics shall guide us throughout the day keeping us balanced.

Wishful desire of human habitats to lead a healthy life at home and harmony with neighbors in building awareness about mental health. The aithics to take on the American Crisis of drug addiction &

homelessness through Community outreach: hosting health fare, blood drive, connecting dots with other organizations, etc.

Use of Seed Funds (\$500K SAFE Round)

Your seed investment will drive:

- Platform scaling and backend architecture refinement
- AI model enhancement with ethical oversight
- Clinical validation and community pilot studies
- Regulatory preparation and IP protection

Marketing for early adopters, especially students and mental health professionals

aithics invites you to join us at the ground floor through a SAFE seed investment opportunity. We are building a transformative Mental Healthcare Program within a global industry valued in billions. Our revenue model is clear and scalable driven by subscription services and professional licensing.

To launch this vision, we have set a focused action plan to raise \$500K in our Friends & Family round. This is your chance to participate under the SEC-compliant SAFE Seed Investment Round, supporting both innovation in mental healthcare and global economic development. We warmly welcome you to invest and grow with us as we shape the future of neuroscience and artificial intelligence (AI) for human well-being.
